

## **ABSTRACT**

A swinging display mounting structure is disclosed to include a housing, which has a front receiving open chamber and can be installed in the headrest of a vehicle chair or the instrument of a motor vehicle, a display receivable to the front receiving open chamber of the housing, and a joint, which secures the display to the housing for enabling the display to be turned in the front receiving open chamber within 180 angles to have the display screen exposed to the outside or kept from sight.
